StringParity

```java
import java.util.Scanner;

public class StringParity {
public static void main (String[] args) {
    Scanner stdin = new Scanner (System.in);
    System.out.print ("Enter a word: ");
    String word = stdin.next ();
    int length = word.length ();

    if (length % 2 == 0) {
        System.out.println ("even");
    } else {
        System.out.println ("odd");
    }
}
}
```
