Initials

```java
import java.util.Scanner;
public class Initials {
    public static void main (String[] args);
        Scanner stdin = new Scanner (System.in);
        String word1 = stdin.next();
        String word2 = stdin.next();

        boolean isLowerCase = word1.equals (word1.toLowerCase())
        && word2.equals (word2.toLowerCase());

        char initial1 = word1.charAt(0);
        char initial2 = word2.charAt(0);

        if (isLowerCase) {
            System.out.println ("Enter two words. " + Character.toLowerCase (initial1) +
        "." + Character.toLowerCase (initial2) + ".");
        } else {
            System.out.println ("Enter two words: " + Character.toUpperCase (initial1)
        + "." + Character.toUpperCase (initial2) + ".");
        }
    }
}
```
